

PHP Sessions - Assignment 2 (Module 3, 4 & 5)

1. Write a PHP program to calculate the sum of all even numbers between 1 and 100 using a loop.
2. Create an associative array of 3 cities and their populations. Print the city with the highest population.
3. Write a function to check if a string is a palindrome.
4. Create a form to collect user feedback (name, mobile number, email and message) and display the submitted data on another page.
